NOTE	4p.
EDRS PRICE	MF-$0.65 HC-$3.29
DESCRIPTORS	*Behavior Patterns; *Bibliographies; *Psychiatry; *Psychological Patterns; Reinforcement; Research Reviews (Publications); Response Mode; *Stimuli

ABSTRACT

Fixation and regression were considered complementary by Freud. You tend to regress to a point of fixation. They are both opposed to progression. In the general area, Anna Freud has written (The Ego and the Mechanisms of Defence. London: Hogarth and the Psycho-Analytic Institute, 1937), Sears has evaluated (Survey of Objective Studies of Psychoanalytic Concepts. New York: Social Science Research Council, Bull. No. 51, 1943; and Experimental analysis of psychoanalytic phenomena. In Hunt, J. McV. (Ed.), Vol. I. Personality and the Behavior Disorders. New York: Ronald, 1944), and Yates has evaluated (Frustration and Conflict. New York: Wiley, 1962). Fixation is difficult to research directly in humans. This bibliography includes investigations between the middle 1930's and the early 1960's. (Author)
